Doors, gates and transport equipment

Secure, reliable and functional doors, gates, lifts and escalators. We handle project planning, evaluation, commissioning and handing over of operations for equipment so that you can safely and easily move the airport.

Services

- Maintenance and inspection of doors, gates and single access entry control systems
- Fire protection and escape route, doors must be regularly inspected by trained personnel. If needed, we are happy to have this inspection done for you.
- Access via a badge system (one-off investment in installation, material and operation in the annual fixed fee)
- First-level support for elevators, escalators and crane systems, calling in suppliers
- As technical planners, we offer assistance with the invitation to tender and the selection of suitable products and suppliers. We’re more than happy to provide you with contact details.

Specialist area

- Mechanical doors and gates
- Automatic doors and gates
- Single access entry control systems/security doors
- Access control systems
- Passenger and goods lifts
- Escalators and passenger conveyors
- Façade access equipment
- Crane systems

Benefits

- For maintenance and handling of issues, our technicians are on site daily from 6 a.m. until 11 p.m. which provides flexibility. The stand-by personnel for deployment outside these hours have equal knowledge of the location and access authorization while being familiar with your requirements.
- All technicians have extensive specialist knowledge and vast experience from securing our own facilities
- Many years of working with airport-related companies
- Spare parts warehouse of common suppliers on site, spare parts are always readily available
- A leased access control system creates cost transparency and relieves you of software updates, system modifications etc.
- The documents relating to the maintenance of security and liability-related facilities are archived in accordance with official requirements and can be presented to the controlling bodies at any given time

Quality standards

- Our top priority is maintaining high standards, reliability and accessibility of facilities
- When technical problems arise, we are fast on location, quickly attending to the issue at hand, day or night 7 days a week. If the technician is unable to remedy the issue, he calls the supplier directly.

Quality control

- Detailed control based on checklists – specified for each maintenance group
